

## How to cypypaste columns in VB.NET with ByteScout Spreadsheet SDK

Write code in VB.NET to cypypaste columns with this step-by-step tutorial

Learn how to cypypaste columns in VB.NET with this source code sample. ByteScout Spreadsheet SDK is the SDK that can write and read, modify and calculate Excel and CSV spreadsheets. Most popular formulas are supported. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays. It can cypypaste columns in VB.NET.

VB.NET code samples for VB.NET developers help to speed up coding of your application when using ByteScout Spreadsheet SDK. Just copy and paste the code into your VB.NET application's code and follow the instruction. Use of ByteScout Spreadsheet SDK in VB.NET is also explained in the documentation included along with the product.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

Program.vb

```

Imports System.Collections.Generic
Imports System.Diagnostics
Imports System.IO
Imports System.Text
Imports Bytescout.Spreadsheet

Class Program
    Friend Shared Sub Main(args As String())
        ' Open spreadsheet from file
        Dim document As New Spreadsheet()
        document.LoadFromFile("example.xls")
        ' document.LoadFromFile(@"d:\2\1\Bytescout\Spreadsheet SDK\TestCase\Fo

        ' Get first worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets(0)

        ' Copy first two ("A-B") columns to the fourth ("D") column
        worksheet.Columns.CopyAndPaste(0, 1, 12)

        ' Delete output file if exists
        If File.Exists("changed.xls") Then
            File.Delete("changed.xls")
        End If

        ' Save document
        document.SaveAs("changed.xls")

        ' Close spreadsheet
        document.Close()

        ' Open generated XLS document in default program
        Process.Start("changed.xls")
    End Sub
End Class
