

How to export to dataset in VB.NET and ByteScout Spreadsheet SDK

Tutorial on how to export to dataset in VB.NET

The code below will help you to implement an VB.NET app to export to dataset. ByteScout Spreadsheet SDK is the SDK to create, read, modify and calculate spreadsheets. Formula calculations are supported, import and export to and from JSON, CSV, XML, databases, arrays and you can use it to export to dataset with VB.NET.

VB.NET code samples for VB.NET developers help to speed up coding of your application when using ByteScout Spreadsheet SDK. This VB.NET sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! You can use these VB.NET sample examples in one or many applications.

You can download free trial version of ByteScout Spreadsheet SDK from our website to see and try many others source code samples for VB.NET.

VB.NET - Module1.vb

```
Module Module1

    Sub Main()
        Dim inputFile As String = "PeriodicTableOfElementsSpreadsheet.xls"

        'Open and load spreadsheet
        Dim spreadsheet = New Spreadsheet()
        spreadsheet.LoadFromFile(inputFile)

        'Get the data from the spreadsheet
        Dim ds As DataSet = spreadsheet.ExportToDataSet()

        'Close spreadsheet
        spreadsheet.Close()

        'Display data in first datatable of dataset
        Dim dt As DataTable = ds.Tables(0)
        Console.WriteLine("Displaying contents of first datatable")
        For i As Integer = 0 To dt.Rows.Count - 1
            For j As Integer = 0 To dt.Columns.Count - 1

                Console.Write(dt.Rows(i)(j) + " ")
            Next
            Console.WriteLine()
        Next
    End Sub
End Module
```

```
'Pause  
Console.ReadLine()  
End Sub  
  
End Module
```
