

How to import from JSON in VB.NET with ByteScout Spreadsheet SDK

How to code in VB.NET to import from JSON with this step-by-step tutorial

On this page you will learn from code samples for programming in VB.NET. Writing of the code to import from JSON in VB.NET can be done by developers of any level using ByteScout Spreadsheet SDK. ByteScout Spreadsheet SDK is the SDK component for writing, reading, modifying and calculating Excel and CSV spreadsheets. Can calculate and recalculate formulas with Excel installed. You may import or export data to and from CSV, XML, JSON. Supports export to databases, arrays, streams and you can use it to import from JSON with VB.NET.

This code snippet below for ByteScout Spreadsheet SDK works best when you need to quickly import from JSON in your VB.NET application. Just copy and paste the code into your VB.NET application's code and follow the instruction. Enjoy writing a code with ready-to-use sample codes in VB.NET.

Trial version of ByteScout Spreadsheet SDK can be downloaded for free from our website. It also includes source code samples for VB.NET and other programming languages.

VB.NET - Module1.vb

```
Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()

        Using spreadsheet As New Spreadsheet

            ' Load JSON string from file
            Dim jsonString As String = File.ReadAllText("sample.json")

            ' Import JSON
            spreadsheet.ImportFromJSON(jsonString)

            ' Save spreadsheet
            spreadsheet.SaveAsXLS("result.xls")

            ' Open the result file in default associated application
            Process.Start("result.xls")

        End Using

    End Sub

End Module
```

End Module
