

How to merge cells in VB.NET with ByteScout Spreadsheet SDK

How to merge cells in VB.NET

These source code samples are listed and grouped by their programming language and functions they use. ByteScout Spreadsheet SDK is the library (SDK) that is capable of writing, reading, modifying and calculating Excel and CSV spreadsheets. Most popular formulas can be calculated and recalculated with Excel installed. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays and you can use it to merge cells with VB.NET.

The SDK samples like this one below explain how to quickly make your application do merge cells in VB.NET with the help of ByteScout Spreadsheet SDK. This VB.NET sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Implementing VB.NET application typically includes multiple stages of the software development so even if the functionality works please test it with your data and the production environment.

You can download free trial version of ByteScout Spreadsheet SDK from our website to see and try many others source code samples for VB.NET.

Source Code Files:

```
Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()
        ' Create new Spreadsheet
        Dim document As New Spreadsheet()

        ' Get worksheet by name
        Dim worksheet As Worksheet = document.Workbook.Worksheets.Add("Sheet1")

        ' Merge cells
        worksheet.Range("B6:D18").Merge()

        ' Write text
        worksheet.Cell("C10").MergedWithCell.Value = "Bytescout.Spreadsheet"

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document.SaveAs("Output.xls")

        ' Close Spreadsheet
        document.Close()

        ' open in default spreadsheets viewer/editor
        Process.Start("Output.xls")

    End Sub

End Module
```
