

How to merge two documents in VB.NET and ByteScout Spreadsheet SDK

The tutorial below will demonstrate how to merge two documents in VB.NET

This sample source code below will demonstrate you how to merge two documents in VB.NET. ByteScout Spreadsheet SDK is the SDK that can write and read, modify and calculate Excel and CSV spreadsheets. Most popular formulas are supported. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays. It can be used to merge two documents using VB.NET.

You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout Spreadsheet SDK for merge two documents below and use it in your application. Follow the instructions from the scratch to work and copy the VB.NET code. Enjoy writing a code with ready-to-use sample VB.NET codes.

Our website provides trial version of ByteScout Spreadsheet SDK for free. It also includes documentation and source code samples.

Source Code Files:

Module1.vb

```

Imports System
Imports System.Collections.Generic
Imports System.Text
Imports Bytescout.Spreadsheet
Imports System.Diagnostics
Imports System.IO

Module Module1

    Sub Main()
        ' Open existing Spreadsheets
        Dim document1 As New Spreadsheet()
        document1.LoadFromFile("workbook1.xls")

        Dim document2 As New Spreadsheet()
        document2.LoadFromFile("workbook2.xls")

        ' Create output document
        Dim document3 As New Spreadsheet()

        ' Add new worksheet
        document3.Workbook.Worksheets.Add()

        ' Target row
        Dim targetRow As Integer = 0
        For i As Integer = 0 To 9

            ' Copy cells from first document
            For j As Integer = 0 To 11
                document3.Worksheet(0).Cell(targetRow, j).Value = document1.Worksheet(0).Cell(j, targetRow).Value
            Next
            targetRow += 1
        Next

        For i As Integer = 0 To 9

            ' Copy cells from second document
            For j As Integer = 0 To 11
                document3.Worksheet(0).Cell(targetRow, j).Value = document2.Worksheet(0).Cell(j, targetRow).Value
            Next
            targetRow += 1
        Next

        ' remove output file if already exists
        If File.Exists("Output.xls") Then
            File.Delete("Output.xls")
        End If

        ' Save document
        document3.SaveAs("Output.xls")

        ' Close Spreadsheet
        document3.Close()

        ' open in default spreadsheets viewer/editor
        Process.Start("Output.xls")
    End Sub
