

# How to read merged cells in VB.NET with ByteScout Spreadsheet SDK

The tutorial below will demonstrate how to read merged cells in VB.NET

We made thousands of pre-made source code pieces for easy implementation in your own programming projects. ByteScout Spreadsheet SDK is the SDK component for writing, reading, modifying and calculating Excel and CSV spreadsheets. Can calculate and recalculate formulas with Excel installed. You may import or export data to and from CSV, XML, JSON. Supports export to databases, arrays, streams. It can read merged cells in VB.NET.

This rich sample source code in VB.NET for ByteScout Spreadsheet SDK includes the number of functions and options you should do calling the API to read merged cells. This VB.NET sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Test VB.NET sample code examples whether they respond your needs and requirements for the project.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

VB.NET - Module1.vb

```
Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()
        ' Create new Spreadsheet
        Dim document As New Spreadsheet()
        document.LoadFromFile("Input.xls")

        ' Get worksheet by name
        Dim worksheet As Worksheet = document.Workbook.Worksheets("Sheet1")

        ' Read merged cell
        Dim cell As Cell = worksheet.Cell("C12").MergedWithCell

        ' Read cell value
        Console.WriteLine(cell.Value)

        ' Close document
        document.Close()

    End Sub

End Module
```
