

# How to read XLSX (office 2007) files in VB.NET and ByteScout Spreadsheet SDK

## Tutorial on how to read XLSX (office 2007) files in VB.NET

Source code documentation samples provide quick and easy way to add a required functionality into your application. ByteScout Spreadsheet SDK is the SDK to create, read, modify and calculate spreadsheets. Formula calculations are supported, import and export to and from JSON, CSV, XML, databases, arrays. It can be used to read XLSX (office 2007) files using VB.NET.

You will save a lot of time on writing and testing code as you may just take the VB.NET code from ByteScout Spreadsheet SDK for read XLSX (office 2007) files below and use it in your application. In order to implement the functionality, you should copy and paste this code for VB.NET below into your code editor with your app, compile and run your application. Code testing will allow the function to be tested and work properly with your data.

Free trial version of ByteScout Spreadsheet SDK is available on our website. Documentation and source code samples are included.

VB.NET - Module1.vb

```
Imports Bytescout.Spreadsheet
Imports System.IO

Module Module1

    Sub Main()
        ' Create new Spreadsheet
        Dim document As New Spreadsheet()
        document.LoadFromFile("Hello_world.xlsx")

        ' Get worksheet
        Dim worksheet As Worksheet = document.Workbook.Worksheets.ByName("Sheet1")

        ' Read cell value
        Console.WriteLine("Cell (0,0) value: {0}", worksheet.Cell(0, 0).Value)

        ' Write message
        Console.Write("Press any key to continue...")

        ' Wait user input
        Console.ReadKey()
    End Sub

End Module
```
