How to change column height in VBScript with ByteScout Spreadsheet SDK

How to change column height in VBScript

The coding tutorials are designed to help you test the features without need to write your own code. What is ByteScout Spreadsheet SDK? It is the SDK that can write and read, modify and calculate Excel and CSV spreadsheets. Most popular formulas are supported. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays. It can help you to change column height in your VBScript application.

You will save a lot of time on writing and testing code as you may just take the VBScript code from ByteScout Spreadsheet SDK for change column height below and use it in your application. Follow the instructions from the scratch to work and copy the VBScript code. Further enhancement of the code will make it more vigorous.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

ChangeColumn.vbs

```vbs
' IMPORTANT NOTE: you need to have .NET Framework 1.10 installed to use Spreadsheet SDK
' to download and install .NET Framework 1.10 please use this link: http://www.microso

Set document = CreateObject("Bytescout.Spreadsheet.Spreadsheet")

document.RegistrationName = "demo"
document.RegistrationKey = "demo"

 ' Add new worksheet
Set worksheet = document.Workbook.Worksheets.Add("HelloWorld")

' add cell with HTML formatted text
Set cell = worksheet.Cell(2,2)
cell.ValueAsHTML = "test resizing"

set column = worksheet.columns.Item(1)

column.Width = 200

' delete output file if exists already
Set fso = CreateObject("Scripting.FileSystemObject")
If (fso.FileExists("Output.xls")) Then fso.DeleteFile("Output.xls")
Set fso = nothing

' save document
document.SaveAs "Output.xls"

' close Spreadsheet
Set document = Nothing
```
