

How to use rich text formatting in VBScript using ByteScout Spreadsheet SDK

Tutorial on how to use rich text formatting in VBScript

The coding tutorials are designed to help you test the features without need to write your own code. Want to use rich text formatting in your VBScript app? ByteScout Spreadsheet SDK is designed for it. ByteScout Spreadsheet SDK is the library (SDK) that is capable of writing, reading, modifying and calculating Excel and CSV spreadsheets. Most popular formulas can be calculated and recalculated with Excel installed. You may import or export data to and from CSV, XML, JSON as well as to and from databases, arrays.

The SDK samples like this one below explain how to quickly make your application do use rich text formatting in VBScript with the help of ByteScout Spreadsheet SDK. This VBScript sample code is all you need for your app. Just copy and paste the code, add references (if needs to) and you are all set! Use of ByteScout Spreadsheet SDK in VBScript is also explained in the documentation included along with the product.

ByteScout free trial version is available for download from our website. It includes all these programming tutorials along with source code samples.

Source Code Files:

```
Set document = CreateObject("Bytescout.Spreadsheet.Spreadsheet")

document.RegistrationName = "demo"
document.RegistrationKey = "demo"

' Add new worksheet
Set worksheet = document.Workbook.Worksheets.Add("HelloWorld")

' add cell with HTML formatted text
Set cell = worksheet.Cell(1, 1)
cell.ValueAsHTML = "<b>Bold text</b> and <i>Italic text</i>"

' delete output file if exists already
Set fso = CreateObject("Scripting.FileSystemObject")
If (fso.FileExists("Output.xls")) Then fso.DeleteFile("Output.xls")
Set fso = nothing

' save document
document.SaveAs "Output.xls"

' close Spreadsheet
Set document = Nothing
```
