How to add simple text watermark to image for simple text in C# using ByteScout Watermarking SDK

Tutorial: how to add simple text watermark to image for simple text in C#

Here you may find thousands pre-made source code pieces for easy implementation in your own programming projects. Simple text in C# can be implemented with ByteScout Watermarking SDK. ByteScout Watermarking SDK is the software development kit that helps to quickly implement adding of watermarks on top of PNG, JPG, BMP images as well as on multipaged TIFF files. You may select ready to use presets or create your own preset with semitransparent logo images, text lines with adjustable font size, family, color, rotation.

C# code snippet like this for ByteScout Watermarking SDK works best when you need to quickly implement simple text in your C# application. This C# sample code should be copied and pasted into your project. After doing this just compile your project and click Run. You can use these C# sample examples in one or many applications.

Trial version of ByteScout is available for free download from our website. This and other source code samples for C# and other programming languages are available.

Source Code Files:

Program.cs

```csharp
using System;
using System.Diagnostics;
using System.Drawing;
using System.Collections.Generic;
using Bytescout.Watermarking;
using Bytescout.Watermarking.Presets;

namespace Sample
{
    class Program
    {
        static void Main(string[] args)
        {
            // Create Watermarker instance
            Watermarker waterMarker = new Watermarker();

            // Initialize library
            waterMarker.InitLibrary("demo", "demo");

            // Set input file name
            string inputFilePath = "my_sample_image.jpg";
            // Set output file title
            string outputFilePath = "my_sample_output.jpg";

            // Add image to apply watermarks to
            waterMarker.AddInputFile(inputFilePath, outputFilePath);

            // Create new watermark
            SimpleText preset = new SimpleText();

            // Set watermark text
            preset.Text = "Bytescout Watermarking";

            // Set watermark font
            preset.Font = new WatermarkFont("Tahoma", FontStyle.Regular, FontSizeType.F

            // Add watermark to watermarker
            waterMarker.AddWatermark(preset);

            // Set output directory
            waterMarker.OutputOptions.OutputDirectory = ".";

            // Apply watermarks
            waterMarker.Execute();

            // open generated image file in default image viewer installed in Windows
            Process.Start(outputFilePath);
        }
    }
}
