

## How to add filename to image for filename (vb in VB.NET using ByteScout Watermarking SDK

Tutorial: how to add filename to image for filename (vb in VB.NET

Writing of the code to add filename to image in VB.NET can be done by developers of any level using ByteScout Watermarking SDK. ByteScout Watermarking SDK was made to help with filename (vb in VB.NET. ByteScout Watermarking SDK is the library for software developers that can be used to quickly add image watermarking features into your web or desktop applications. Use ready to use presets or create your own to be applied for input PNG, JPG, BMP images. Can customize fonts, text position and rotation if required.

Fast application programming interfaces of ByteScout Watermarking SDK for VB.NET plus the instruction and the code below will help to learn how to add filename to image. This VB.NET sample code should be copied and pasted into your project. After doing this just compile your project and click Run. Further enhancement of the code will make it more vigorous.

ByteScout Watermarking SDK - free trial version is on available our website. Also, there are other code samples to help you with your VB.NET application included into trial version.

Source Code Files:

```
Imports System.Drawing

Imports Bytescout.Watermarking
Imports Bytescout.Watermarking.Presets

Module Module1

    Sub Main()
        ' Create Watermarker instance
        Dim waterMarker = New Watermarker()

        Dim inputFilePath As String
        Dim outputFilePath As String

        ' Initialize library
        waterMarker.InitLibrary("demo", "demo")

        ' Set input file name
        inputFilePath = "my_sample_image.jpg"
        ' Set output file title
        outputFilePath = "my_sample_output.jpg"

        ' Add image to apply watermarks to
        waterMarker.AddInputFile(inputFilePath, outputFilePath)

        ' Create new watermark
        Dim preset As New FileName()

        ' Add watermark to watermarker
        waterMarker.AddWatermark(preset)

        ' Set output directory
        waterMarker.OutputOptions.OutputDirectory = "."

        ' Set output format
        waterMarker.OutputOptions.ImageFormat = OutputFormats.JPEG

        ' Apply watermarks
        waterMarker.Execute()

        ' open generated image file in default image viewer installed in Windows
        Process.Start(outputFilePath)

    End Sub

End Module
```
