

How to add simple text watermark to image with options for simpletext (vb in VB.NET using ByteScout Watermarking SDK

Step By Step Tutorial: how to add simple text watermark to image with options for simpletext (vb in VB.NET

The coding tutorials are designed to help you test the features without need to write your own code. ByteScout Watermarking SDK was made to help with simpletext (vb in VB.NET. ByteScout Watermarking SDK is the software development kit that helps to quickly implement adding of watermarks on top of PNG, JPG, BMP images as well as on multipaged TIFF files. You may select ready to use presets or create your own preset with semitransparent logo images, text lines with adjustable font size, family, color, rotation.

The SDK samples like this one below explain how to quickly make your application do simpletext (vb in VB.NET with the help of ByteScout Watermarking SDK. Open your VB.NET project and simply copy & paste the code and then run your app! Tutorials are available along with installed ByteScout Watermarking SDK if you'd like to dive deeper into the topic and the details of the API.

Trial version of ByteScout is available for free download from our website. This and other source code samples for VB.NET and other programming languages are available.

Source Code Files:

```
Imports System.Drawing

Imports Bytescout.Watermarking
Imports Bytescout.Watermarking.Presets

Module Module1

    Sub Main()
        ' Create Watermarker instance
        Dim watermarker As New Watermarker()

        Dim inputFilePath As String
        Dim outputFilePath As String

        ' Initialize library
        watermarker.InitLibrary("demo", "demo")

        ' Set input file name
        inputFilePath = "my_sample_image.jpg"
        ' Set output file title
        outputFilePath = "my_sample_output.jpg"

        ' Add image to apply watermarks to
        watermarker.AddInputFile(inputFilePath, outputFilePath)

        ' Create new watermark
        Dim preset As New SimpleText()

        ' Set watermark text
        preset.Text = "Bytescout Watermarking"

        ' Set watermark font
        preset.Font = New WatermarkFont("Tahoma", FontStyle.Regular, FontSizeType.Point)

        ' Set watermark text color
        preset.TextColor = Color.Black

        ' Set text transparency
        preset.Transparency = 40

        ' Set watermark placement
        preset.Placement = WatermarkPlacement.MiddleCenter

        ' Add watermark to watermarker
        watermarker.AddWatermark(preset)

        ' Set output directory
        watermarker.OutputOptions.OutputDirectory = "."

        ' Set output format
        watermarker.OutputOptions.ImageFormat = OutputFormats.JPEG

        ' Apply watermarks
        watermarker.Execute()
```

```
' open generated image file in default image viewer installed in Windows  
Process.Start(outputFilePath)
```

```
End Sub
```

```
End Module
```
