

How to convert web page to PDF from link for HTML to PDF API in PHP using PDF.co Web API

How to convert web page to PDF from link for HTML to PDF API in PHP: How To Tutorial

Every ByteScout tool contains example PHP source codes that you can find here or in the folder with installed ByteScout product. PDF.co Web API was made to help with HTML to PDF API in PHP. PDF.co Web API is the flexible Web API that includes full set of functions from e-signature requests to data extraction, OCR, images recognition, pdf splitting and pdf splitting. Can also generate barcodes and read barcodes from images, scans and pdf.

The SDK samples like this one below explain how to quickly make your application do HTML to PDF API in PHP with the help of PDF.co Web API. Open your PHP project and simply copy & paste the code and then run your app! Enjoy writing a code with ready-to-use sample PHP codes to implement HTML to PDF API using PDF.co Web API.

Trial version of ByteScout is available for free download from our website. This and other source code samples for PHP and other programming languages are available.

PHP - web-page-to-pdf.php

```
// Get submitted form data
$apiKey = $_POST["apiKey"]; // The authentication key (API Key). Get your own by
registering at https://app.pdf.co/documentation/api
$sourceUrl = $_POST["sourceUrl"];

// Prepare URL for `Web Page to PDF` API call
$url = "https://api.pdf.co/v1/pdf/convert/from/url" .
      "?name=result.pdf" .
      "&url=" . $sourceUrl;

// Create request
$curl = curl_init();
curl_setopt($curl, CURLOPT_HTTPHEADER, array("x-api-key: " . $apiKey));
curl_setopt($curl, CURLOPT_URL, $url);
```

```

curl_setopt($curl, CURLOPT_POST, true);
curl_setopt($curl, CURLOPT_RETURNTRANSFER, 1);

// Execute request
$result = curl_exec($curl);

if (curl_errno($curl) == 0)
{
    $status_code = curl_getinfo($curl, CURLINFO_HTTP_CODE);

    if ($status_code == 200)
    {
        $json = json_decode($result, true);

        if ($json["error"] == false)
        {
            // Get URL of generated PDF file
            $resultFileUrl = $json["url"];

            // Display link to the file with conversion results
            echo "

```

Conversion Result:

```

" . $resultFileUrl . "
";
    }
    else
    {
        // Display service reported error
        echo "

```

```

Error: " . $json["message"] . "

```

```

";
    }
}
else
{
    // Display request error
    echo "

```

```

Status code: " . $status_code . "

```

```

";
    echo "

```

```

" . $result . "

```

```

";
    }
}
else
{
    // Display CURL error
    echo "Error: " . curl_error($curl);
}

```

```

// Cleanup
curl_close($curl);

```

?>
